## Call for Collaborator Details

**Research Project Title**

Investigate place-based sustainability tensions to support optimal governance for climate actions

**Contact**

**Luca Sabini**

**Contact Email**

[l.sabini@leeds.ac.uk](mailto:l.sabini@leeds.ac.uk)

**University**

University of Leeds

**Date Posted**

08/23/2023

**Proposal Summary**

The nature of tensions around sustainability objectives is profound, decision-makers face tensions and contradictions when dealing with opposing stakeholder interests or competition over scarce resources. Tensions can emerge from opposing sustainable objectives and the approach (or response) to tensions determines success in developing more creative, effective, and sustainable solutions. In view of this consideration, it is relevant to grasp different types of sustainability tensions as this could also help to identify solution pathways.

**Desired Collaborator Profile**

Ideal collaborators will have connection into major infrastructure projects (e.g., water and wastewater, transport, energy, buildings etc.) in global north and global south.
