Patterns of Change: The Frozen Planet

Northern Hemisphere March

Southern Hemisphere September

Permafrost change:

Melting of Permafrost is having a marked Impact on Buildings and Ice Roads

Arctic sea ice:

STROEVE ET AL.: ARCTIC ICE LOSS—FASTER THAN FORECAST

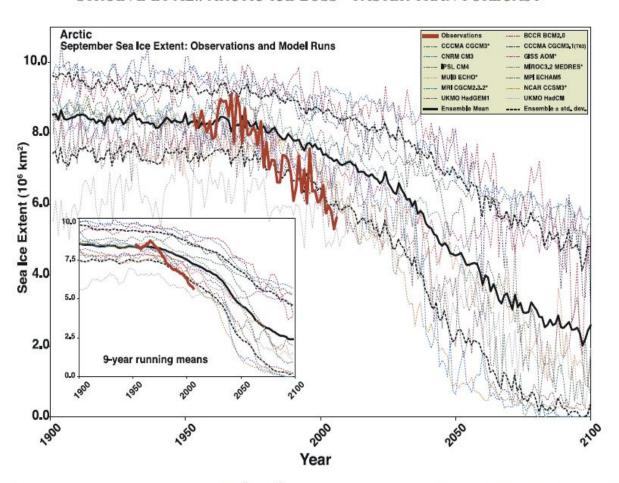

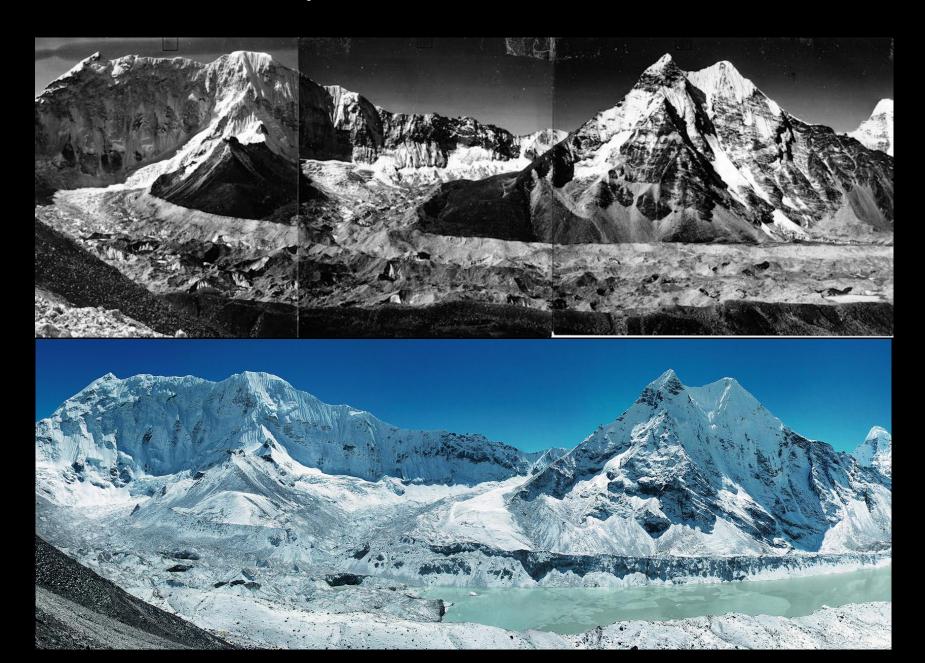

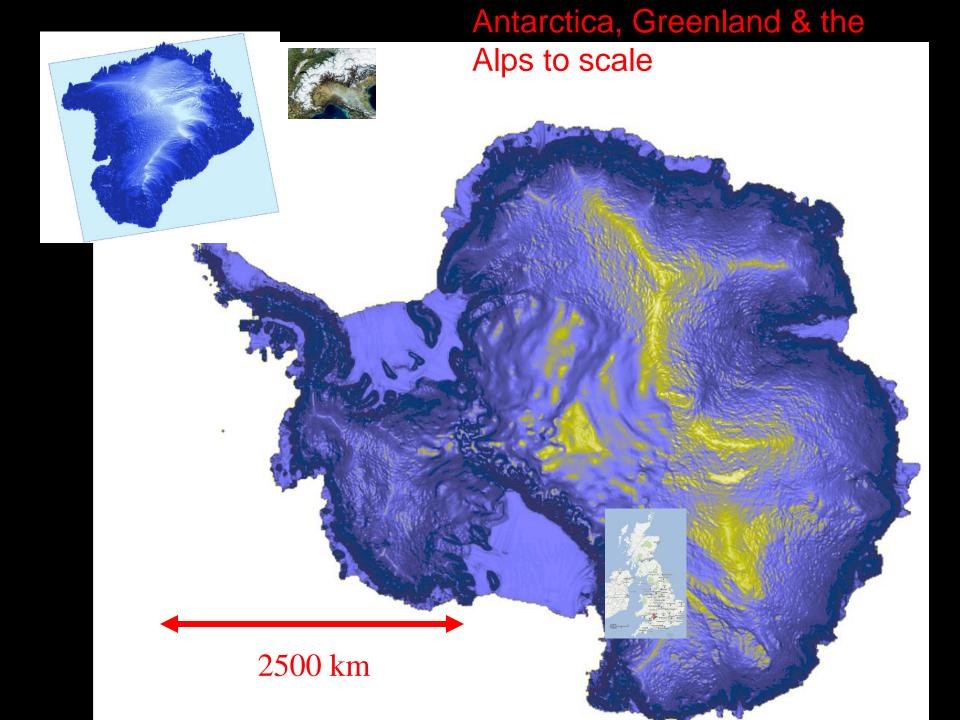

Figure 1. Arctic September sea ice extent (\times 10⁶ km²) from observations (thick red line) and 13 IPCC AR4 climate models, together with the multi-model ensemble mean (solid black line) and standard deviation (dotted black line). Models with more than one ensemble member are indicated with an asterisk. Inset shows 9-year running means.

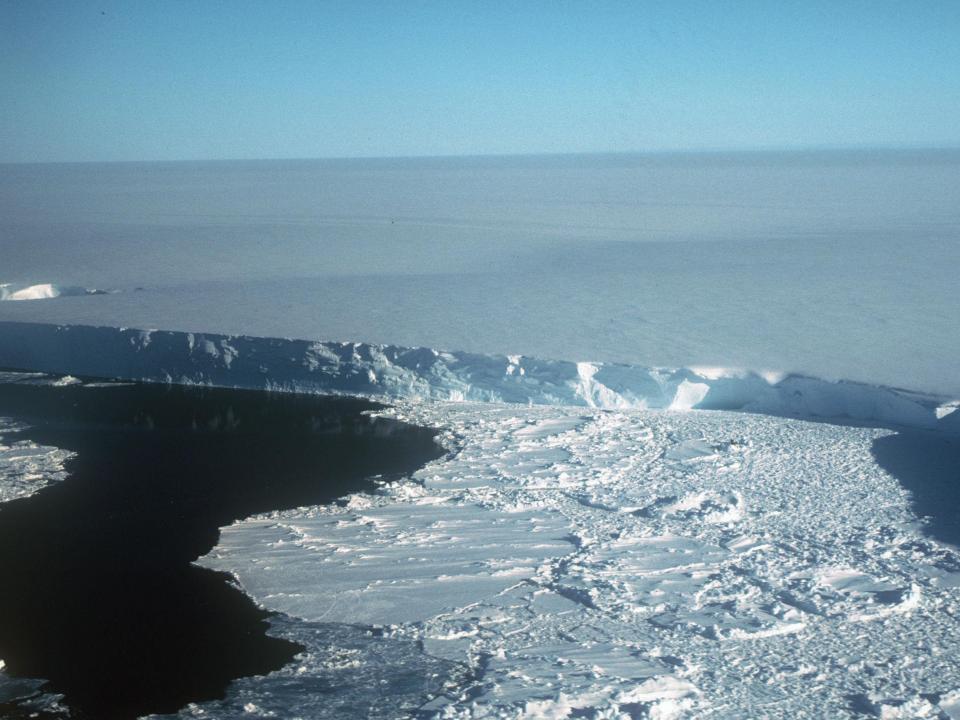

Himalayan glacier in 1950 and now

North face of the Eiger

Professor Kathy Cashman Earth Sciences

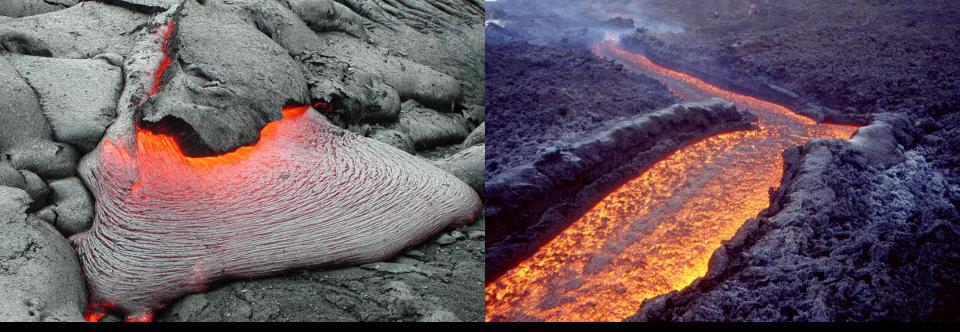

...formed by convective motions that drive 'plate tectonics'

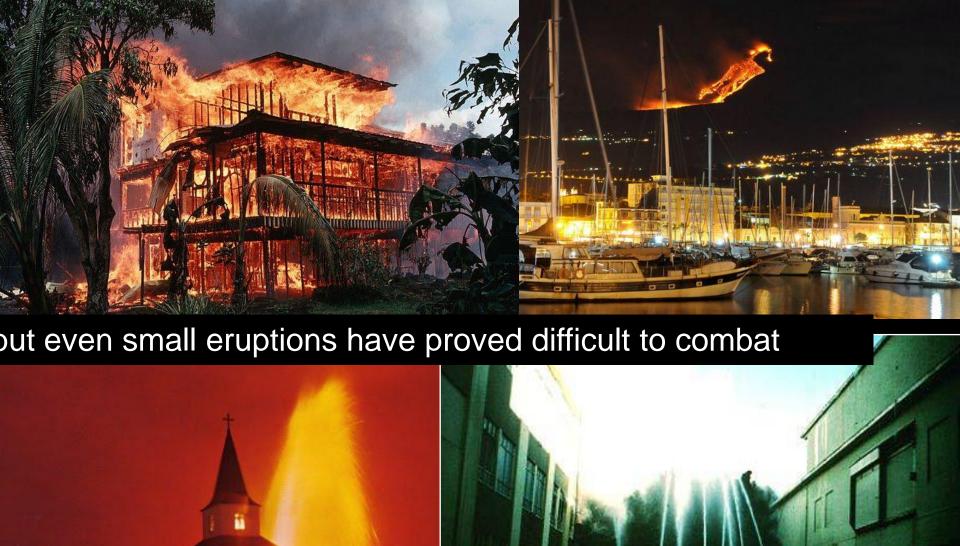

for this reason, lava flows continually surface, and re-surface, much of our planet...

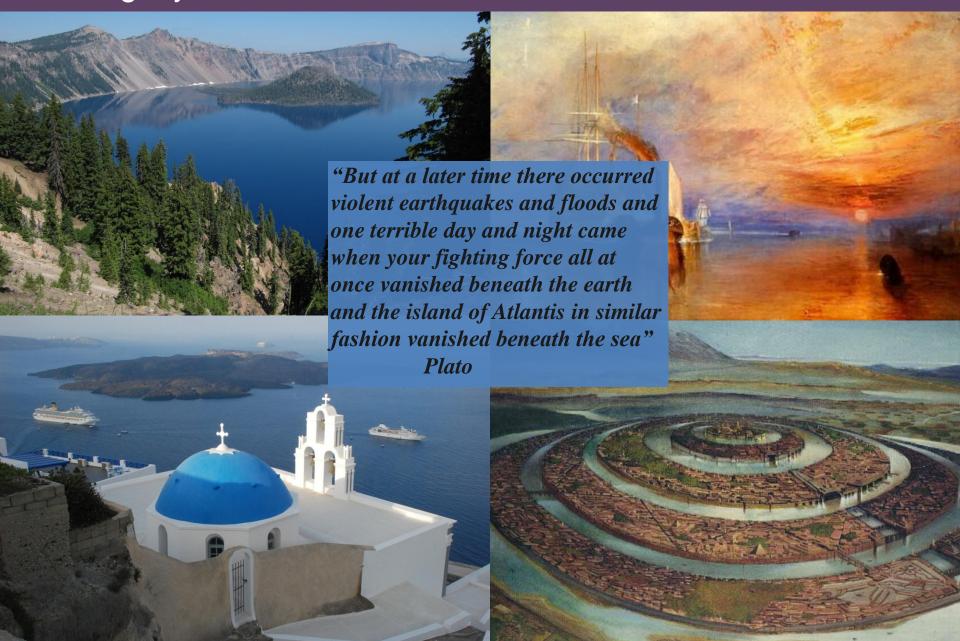

Explosive eruptions devastate nearby regions and disrupt distal communities

roiling earth-gut-trash cloud tephra twelve miles high ash falls like snow on wheatfields and orchards to the east five hundred Hiroshima bombs

in Yakima, darkness at noon

"Letting Go" Gary Snyder (2004) Large eruptions of the past have displaced cultures and given rise to lasting myths

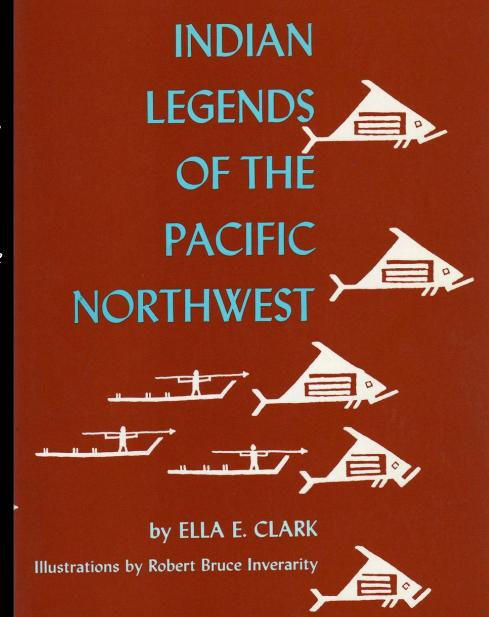

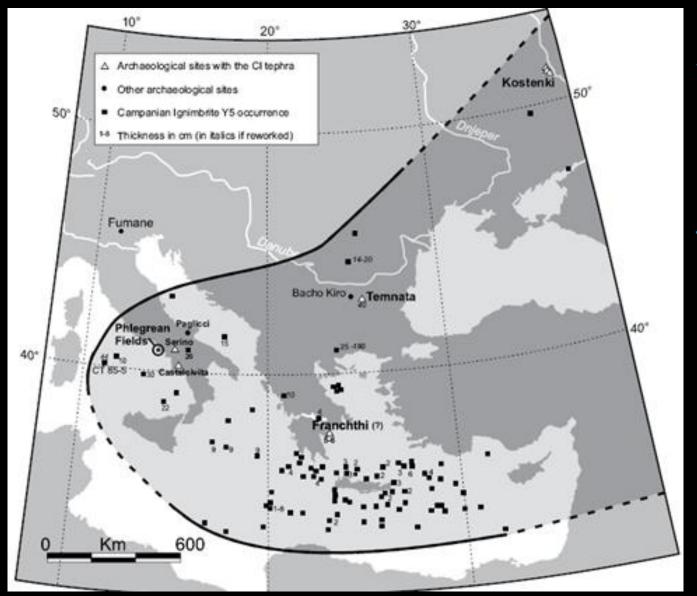

"Why do your people never go up to the lake?" asked the young soldier. "Why are you afraid to look down upon its waters?"

"Oh, you cannot understand," replied the old chief.

"Yes, I can understand," said young Colvig, filling the old man's pipe.

Then Chief Lalak told the following legend, which he said he had learned from his father, who had learned it from his father...

Very large eruptions have been implicated in the demise of the Neanderthals in Europe, and may have caused a 'bottleneck' in human evolution c. 75,000 years ago

but our fragile infrastructure makes us vulnerable to even small explosive eruptions

in that they disrupt not only local transportation, communication and agriculture

"Dutch airline KLM cancels flights due to ash cloud" "Volcanic ash in Iceland could disrupt Scotland flights" "Thousands face volcanic ash cloud flight cancellations" but also regional transport networks

Professor Colin Taylor FICE Civil Engineering

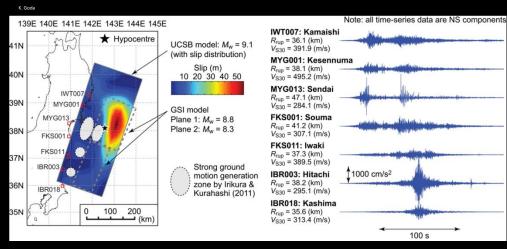

Learning to be resilient

C. Goda

Authorities Media

Rapid collective learning

We need to design layered community learning and action systems, and keep them in tip-top condition

Local Recovery Aftermath

What is resilience?

Being able to cope with change?

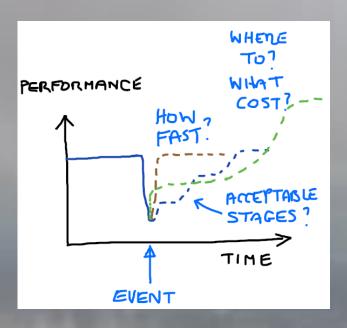

Will the learning experience change my risk perception and tolerance? i.e. Change my personal resilience? Change my community's resilience?

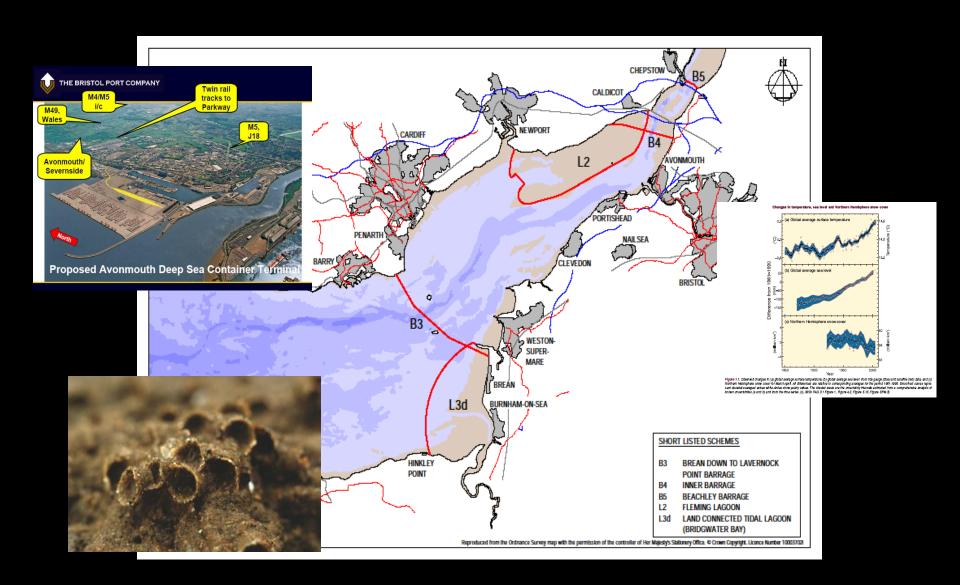

Resilience decisions

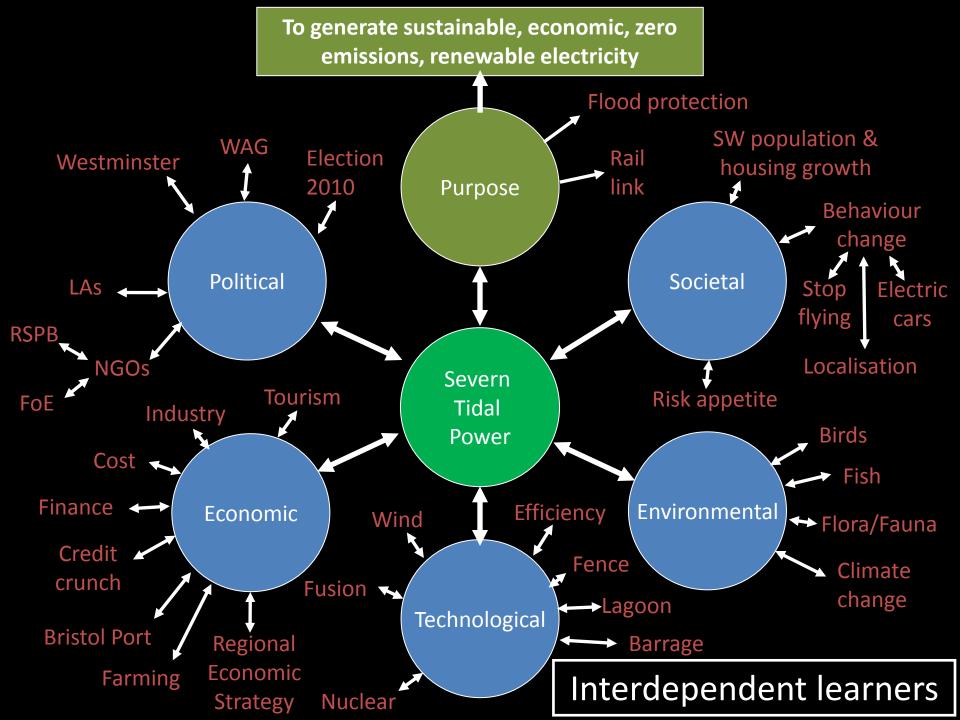

- Do I want to return to how it was before?
- Do I want better?
- Can I afford it?
- Can I create options?
- Interdependent decisions
- Community learning
- Community enterprise

Multidisciplinary problems –

Interdependent learners

COP 15, 2009

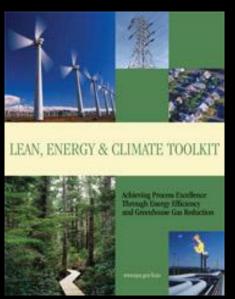

Whats going on in Hamilton House? (...and just who are coexist?) COME FOR AN EVENING OF TALKS AND DISCUSSIONS ABOUT WHAT HAS BEEN HAPPENING IN HAMILTON HOUSE Thursday 31st March - 7pm til 9pm Event Space, Hamilton House, 80 Stokes Croft, BS1 30y

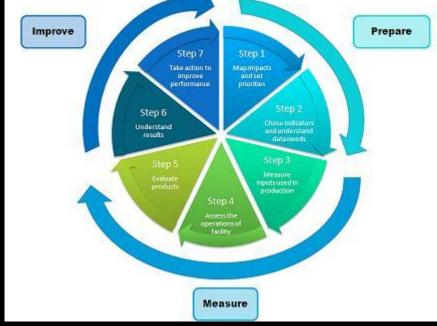

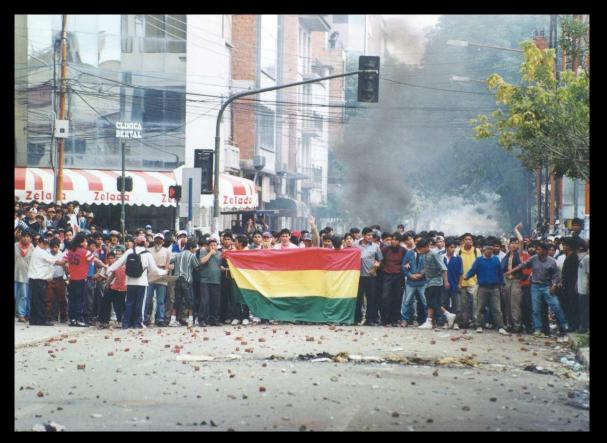

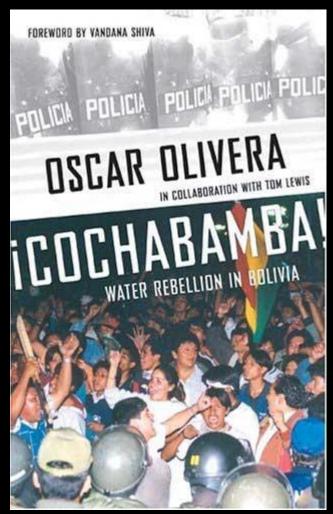

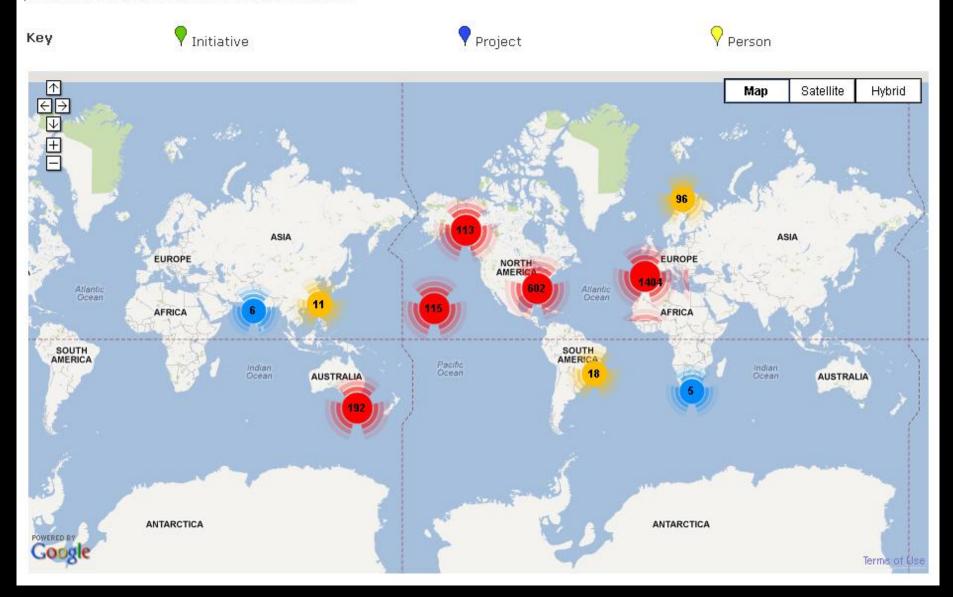

Hamilton House - Ethical Solar

The Big Transition map

This is the Big Transition Map, showing all people, initiatives and projects working in Transition across the world. It's quite busy in some places so be sure to zoom in to see all the action.
