

# NCC - Part of University of Bristol & HVMC

Plus other UoB Institutes

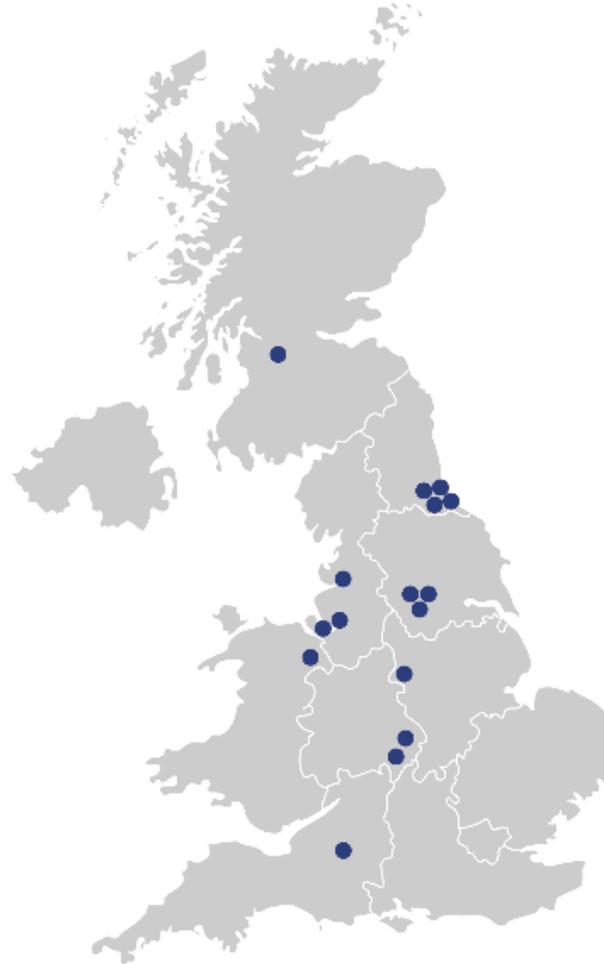

# HVMC - Who We Are

Established by **Innovate UK** in 2011

**Seven centres of industrial innovation across 18 sites** working together on the future of manufacturing in the UK.

**CATAPULT**  
High Value Manufacturing

**Largest advanced manufacturing capability in Europe**

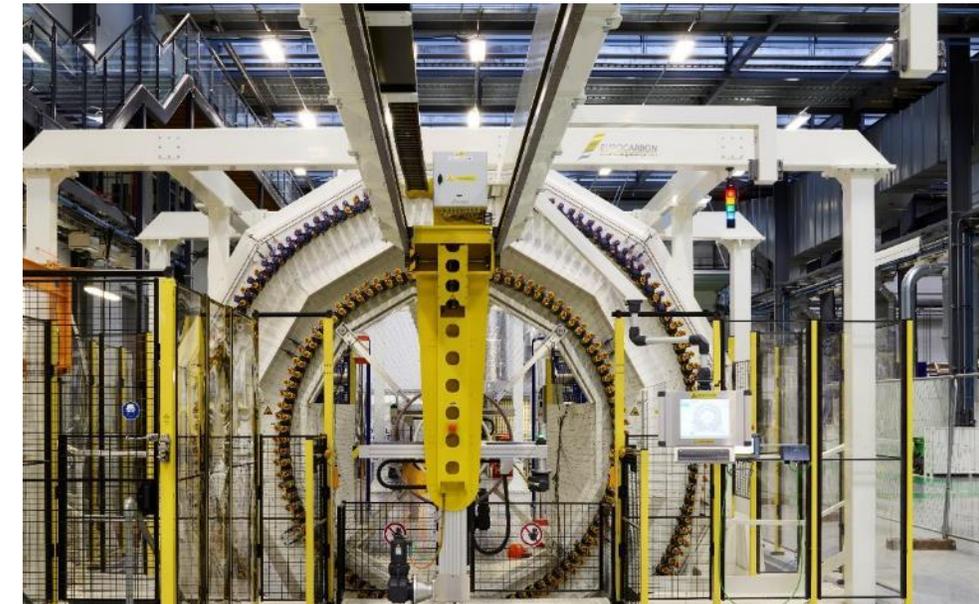

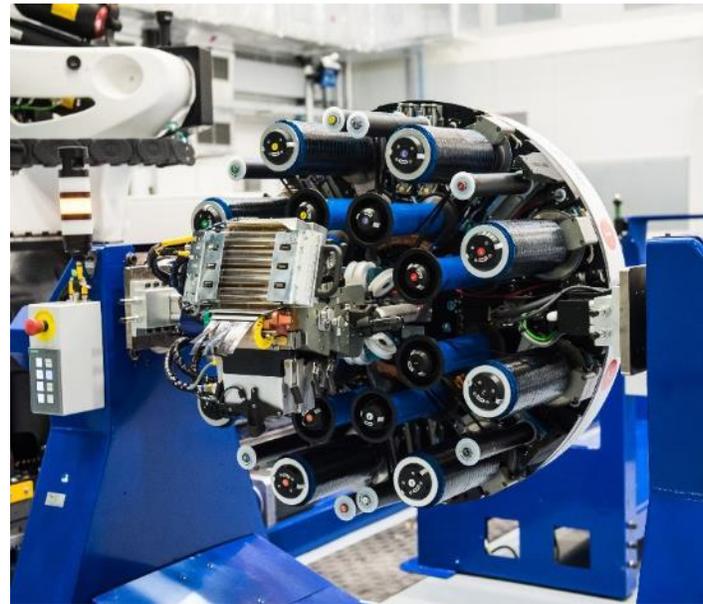

We've worked with more than **22,000** companies

**54%** were SMEs

**4,000+** staff

# NCC - Europe's leading composite innovation capability

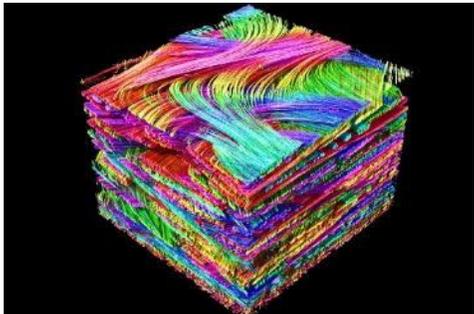

# Catapult mission: Bridging the Valley of Death

# Trends in Automated Composites Manufacturing

- **“Horses for courses”:**
  - Highly specialised solutions
  - Wider portfolio of manufacturing processes for automated deposition and beyond
- From manufactured part inspection to **in-process monitoring:**
  - Rapid identification of quality issues, increased reliability
- From iterative (trial/error) to “Right First Time” to **“Right Every Time”**
  - Advances in Simulation Tools, Machine Learning and other AI, etc allow for “close-loop” manufacturing process

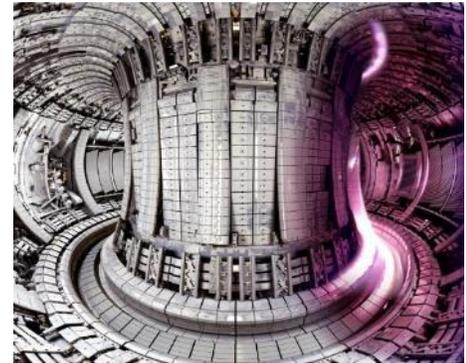

# Composites enabling the Net Zero Transformation: More variety

'Net Zero requires transformational technology to deliver a step change in product and system level performance – composites can enable this transformation'

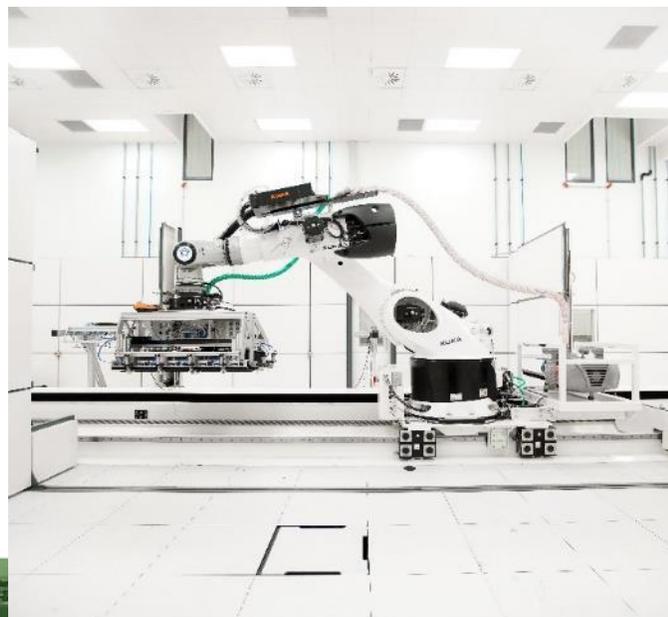

- **Light-weighting to accelerate zero emissions mobility (electric, H2)**
- **Storage and distribution technology to enable hydrogen**
- **Performance step-change to scale wind energy**
- **Zero emission aircraft to achieve 'jet zero'**
- **Energy efficient infrastructure and buildings**
- **High temperature, lightweight materials to unlock nuclear**

# Automated Deposition

# Automated Deposition

# Ultra High-rate Deposition

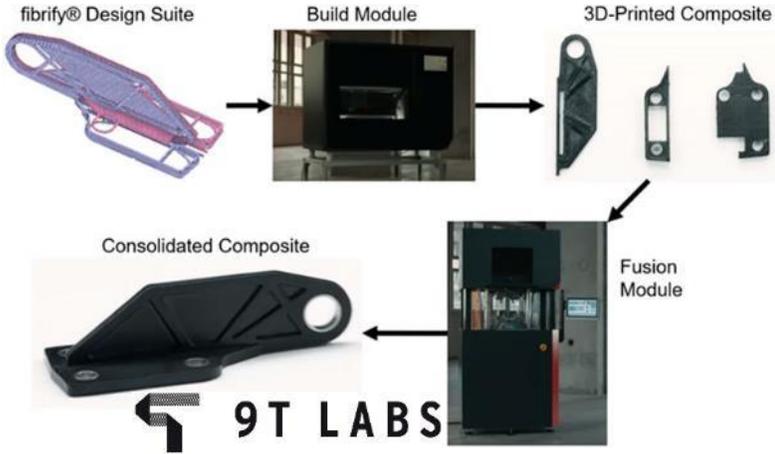

# Additive Manufacturing

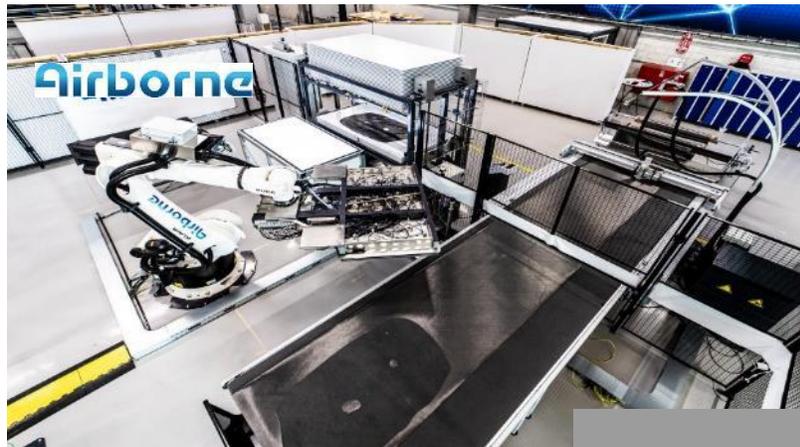

# Continuous Fibre Additive Manufacturing

 **Markforged**

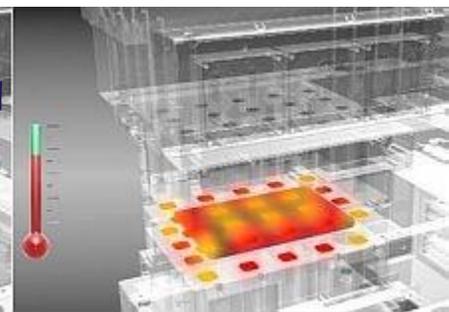

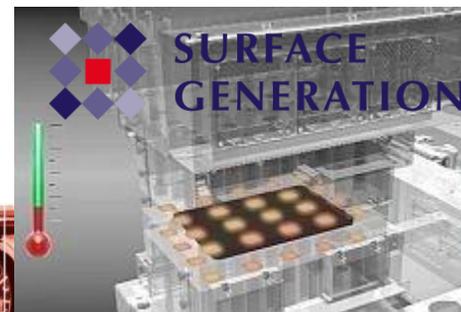

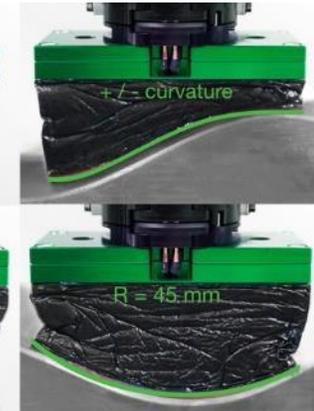

# More automated processes

Impossible Objects

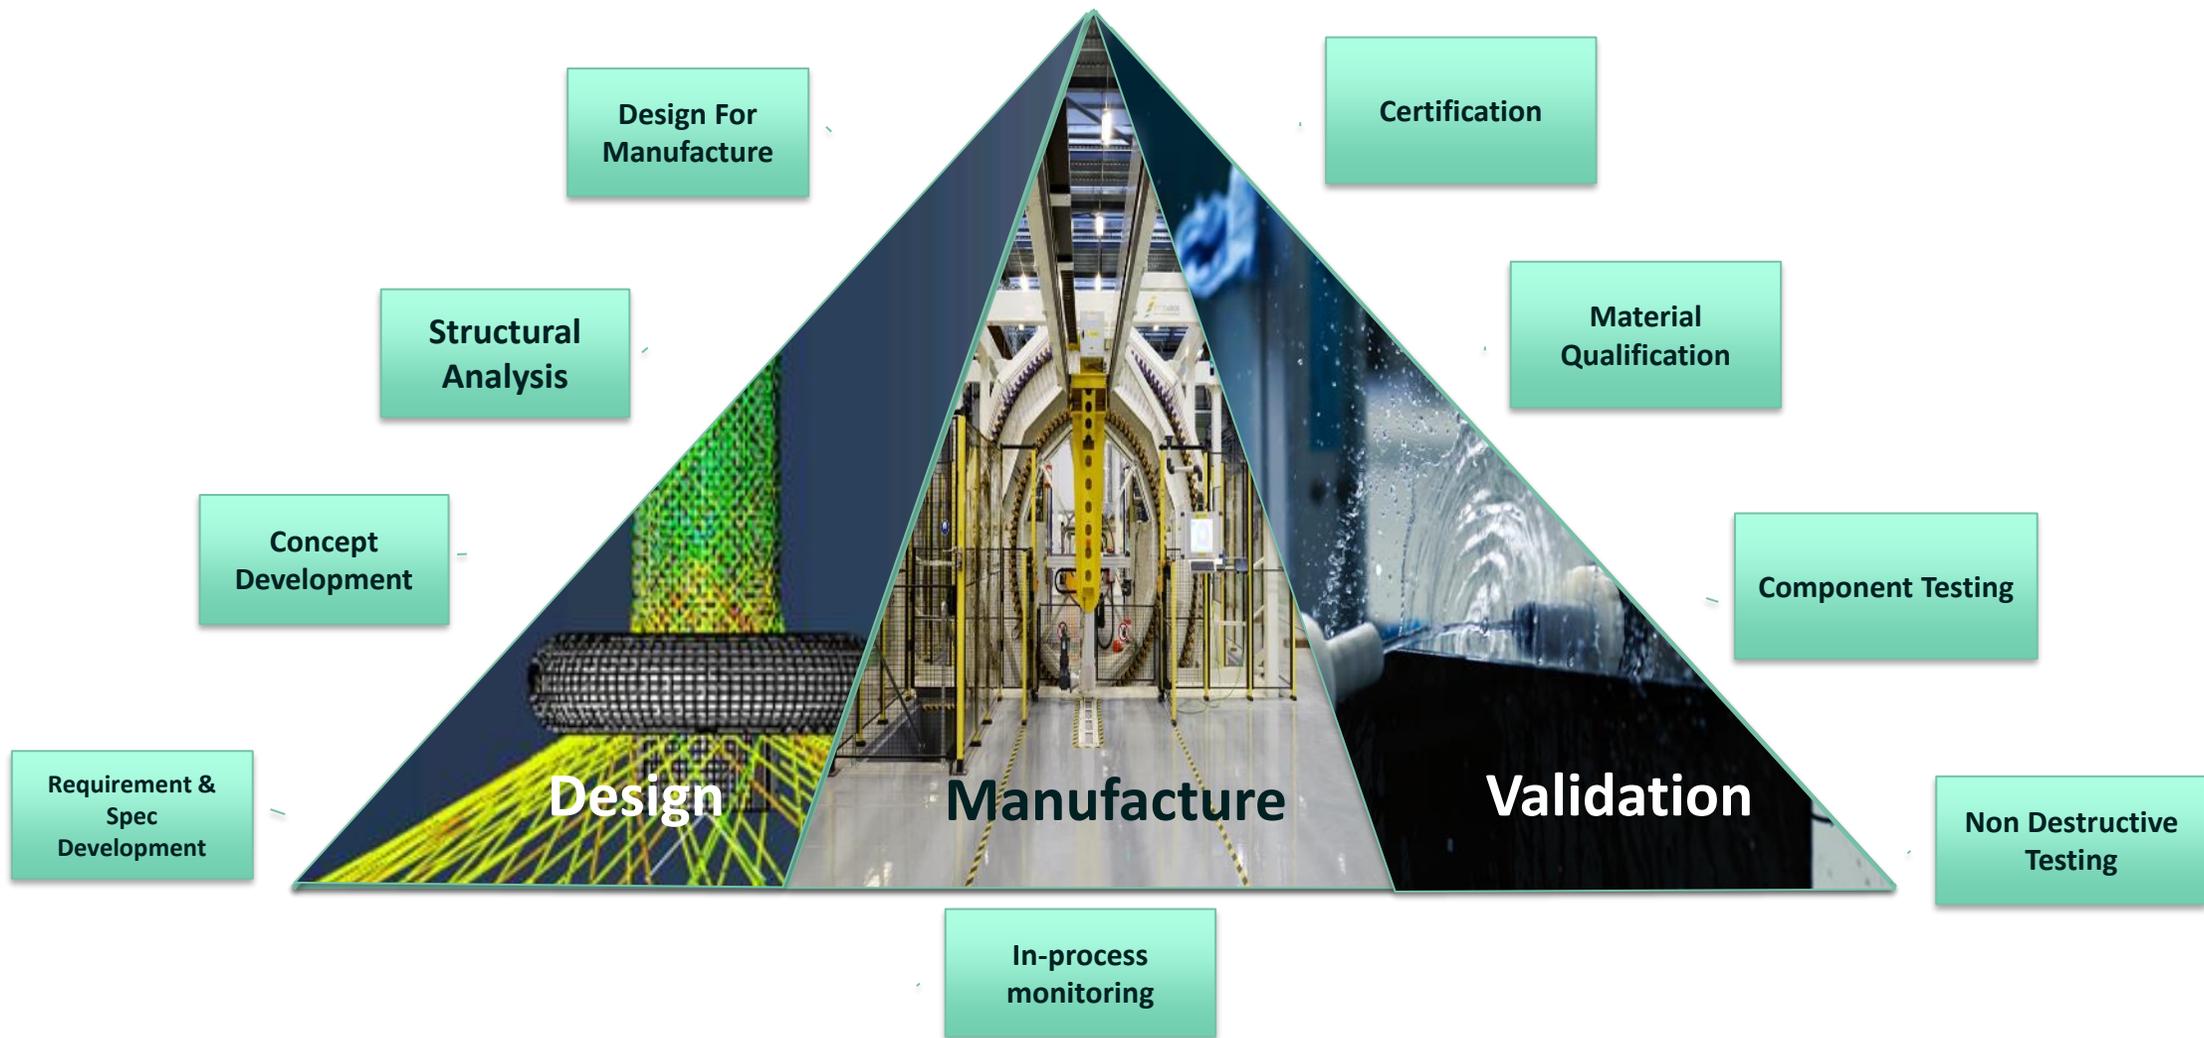

CEVOTEC

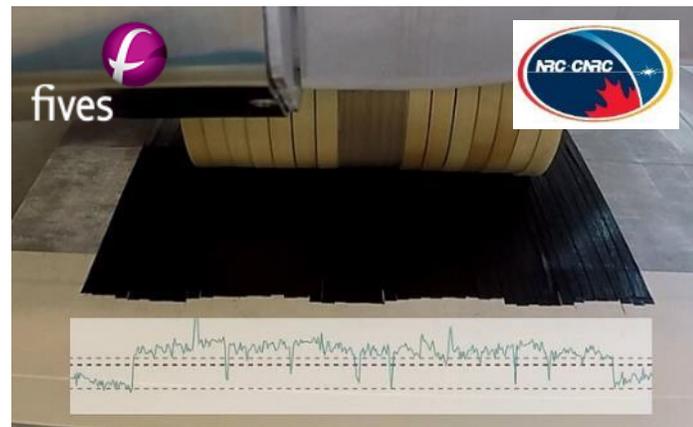

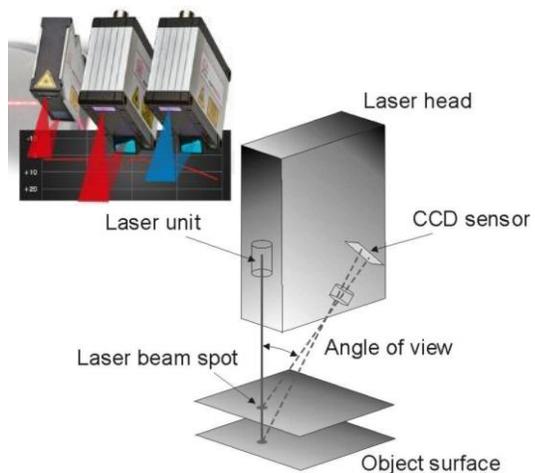

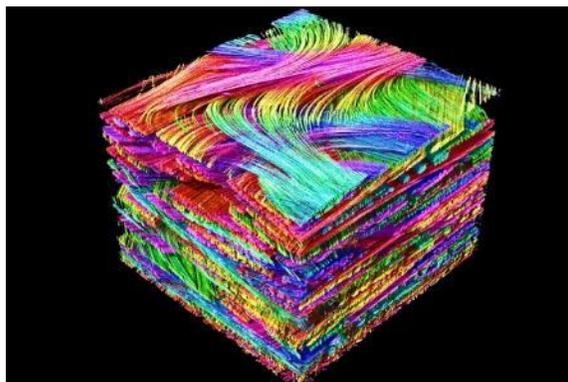

# Automated Manufacturing does NOT work in isolation

# From part inspection to in-process monitoring to maximize AS-MANUFACTURED performance

Line Laser Triangulation (LLT)

Optical Coherence Tomography (LLT)

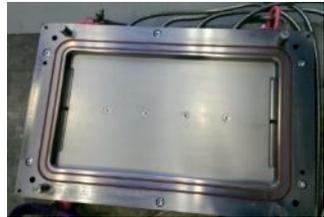

In-tool sensors (flow front, curing,...)

# Digitally enabled closed-loop cycle: Right Every Time

## CLAMPS - Example with RTM component

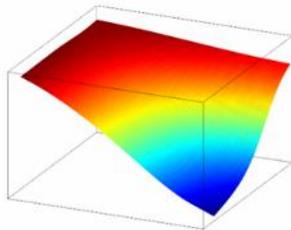

Tool with embedded sensors

Statistical process control

Correlation of the simulation

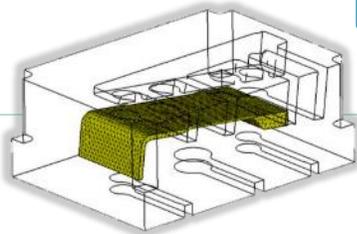

15,000 Simulations to construct a Surrogate Model

Output focused (quality control)

In-process inspection

Offline predictive (manufacturing process simulation)

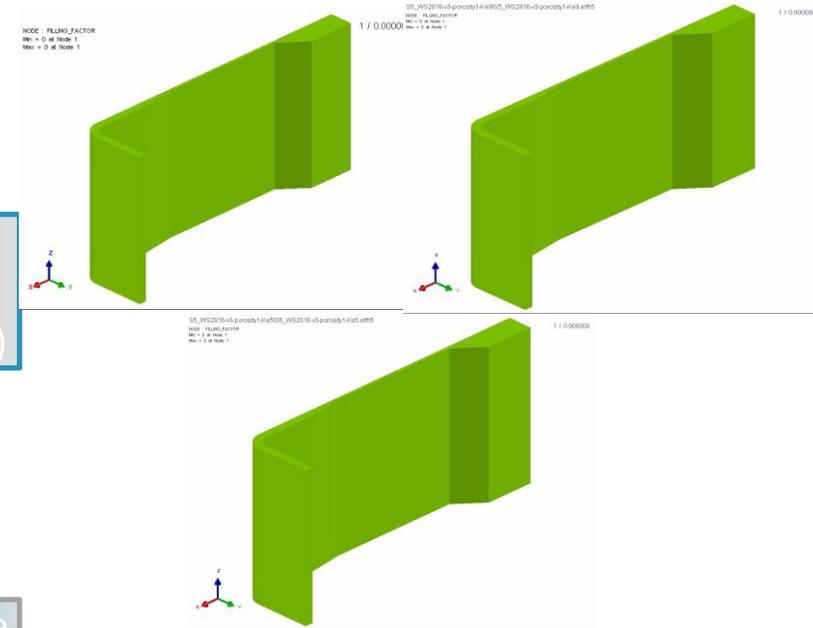

In-process predictive

Updating predictive simulation

In-process control

Process becomes **adaptive** and able to intelligently overcome process variation → **Right-every-time**

High Fidelity Simulation of the manufacturing process

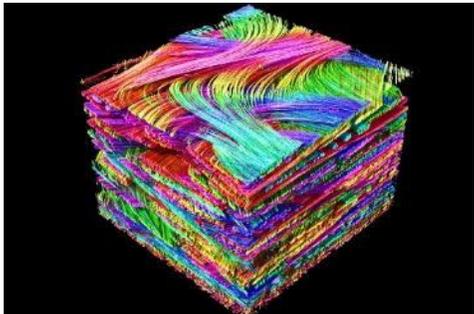

Machine Learning used to build an **adaptive model** with complete understanding of process variables and control requirements

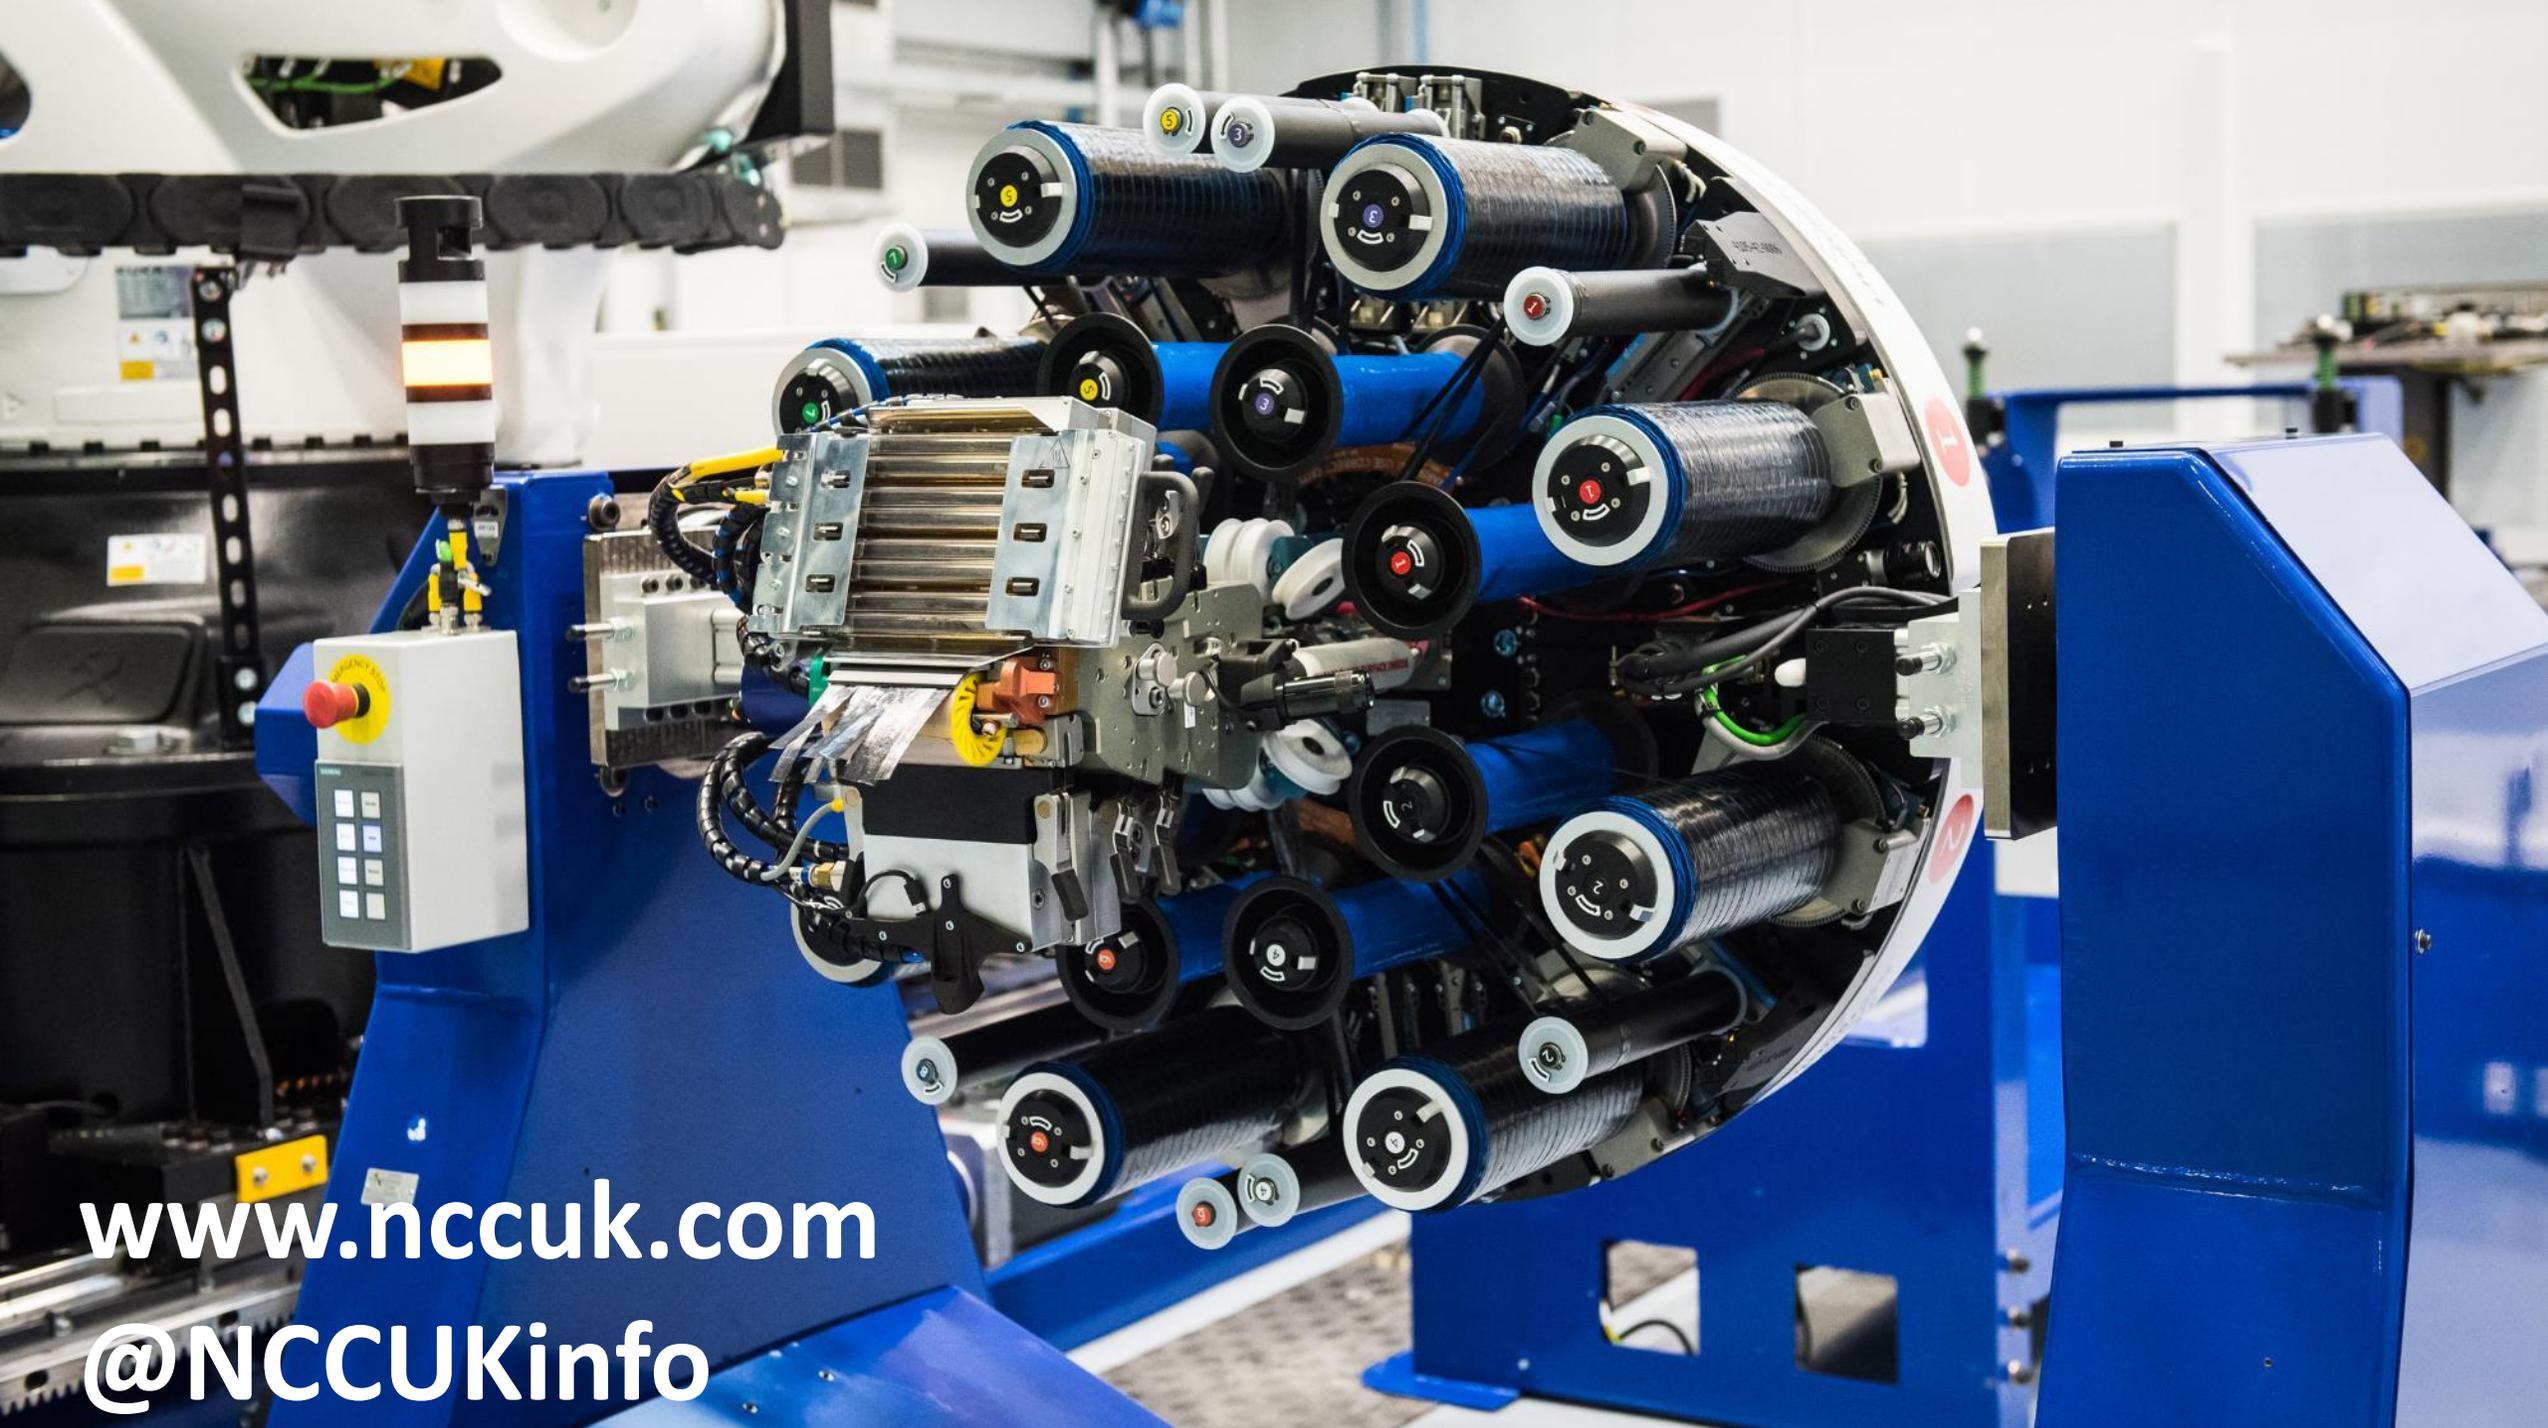

# Automated Composites Manufacturing

- **“Horses for courses”:**
  - Highly specialised solutions
  - Wider portfolio of manufacturing processes for automated deposition and beyond
- From manufactured part inspection to **in-process monitoring:**
  - Rapid identification of quality issues, increased reliability
- From iterative (trial/error) to “Right First Time” to **“Right Every Time”**
  - Advances in Simulation Tools, Machine Learning and other AI, etc allow for “close-loop” manufacturing process
