Socially perceived necessities across time and space

Setting a minimum acceptable way of life

Measures need to:

- Go beyond income to look at deprivation
- Reflect the experiences of the poor
- Reflect the society to which they are applied
- Have appropriate age-related standards
- Provide a clear justification for why these indicators have been chosen
- Are applicable to low, middle and high income countries
- Enable some level of international comparisons

Socially perceived necessities across time and space

Relative deprivation

“... their resources are so seriously below those commanded by the average individual or family that they are, in effect, excluded from ordinary patterns, customs and activities.”

Peter Townsend, *Poverty in the UK*, 1979, p. 31

<https://www.poverty.ac.uk/system/files/townsend-book-pdfs/PIUK/piuk-chapter01.pdf>

Socially perceived necessities across time and space

The problem with the norms-based approach

That something is commonly done does not make it important

“The term poverty carries with it a moral imperative that something should be done about it”

David Piachaud, *Peter Townsend and the Holy Grail*, 1981

That something is not commonly done does not make it unimportant

“material objects cannot be evaluated in this context without reference to how people view them”

Amartya Sen, *Poverty and Famines*, 1981

The concept of socially perceived necessities

- These are identified by public opinion and not by, on the one hand, the views of experts or, on the other hand, the norms of behaviour per se.
- Those items seen by a majority to be essential are classed as socially-perceived necessities. It seeks to find a consensus of what is essential for a minimum standard of living.
- Those who have no choice but to fall below this minimum level can be said to be 'in poverty'.

Mack and Lansley, Poor Britain, 1985

https://www.poverty.ac.uk/system/files/poor_britain_book/poor-britain-chap02-Mack-Lansley.pdf

Breadline Britain survey, 1983

The necessities question

Using shuffle cards participants were asked for each item and activity to distinguish between:

“items which you think are necessary – which all adults should be able to afford and which they should not have to do without and items which may be desirable but are not necessary.”

Breadline Britain survey, 1983

Items tested

- Focus groups in different parts of the country were held to develop indicators of deprivation in tune with people's perceptions of what was necessary for living in Britain in the early 1980s.
- A wide range of items and activities were covered from basic items such as food and heating to consumer goods, leisure activities and social participation
- It included a number of more discretionary items to ensure distinctions were being made.

The items can be found on [here](#).

Socially perceived necessities across time and space

Follow-up surveys

Breadline Britain survey, 1991,

Poverty and Social Exclusion in Britain, 1990

Poverty and Social Exclusion in Northern Ireland, 2002/3

Poverty and Social Exclusion in the UK, 2012

- Many items and activities are the same in all years.
- Some have been excluded as no longer seen as important or ownership nearly 100%
- Some have been introduced to reflect changing the priorities

You can view all the surveys at:

<https://www.poverty.ac.uk/pse-research/questionnaires>

The PSE 2012 findings

<https://www.poverty.ac.uk/pse-research/attitudes-adult-necessities-uk-2012>

25 of the 46 items and activities for adults were seen as necessary

Highest ranked	% seeing as necessity
Heating	96
Damp-free home	94
Two-meals a day	91
Lowest ranked	% seeing as necessity
Going out for a drink fortnightly	17
Going to cinema etc monthly	15
Dishwasher	10

Socially perceived necessities across time and space

Beyond basic needs

<u>Social activities and consumer goods</u>	Percentage seeing item as necessity
Visit friends or family in hospital or other institutions	90%
Celebrations on special occasions	80%
Attend weddings, funerals and other such occasions	79%
Replace or repair electrical goods	86%
Washing machine	82%
Telephone	77%
Household contents insurance	70%

A widespread consensus

<https://www.poverty.ac.uk/pse-research/attitudes-necessities-groups-uk-2012>

<https://www.poverty.ac.uk/pse-research/attitudes-necessities-scatterplots-uk-2012>

The survey finds that across all groups there are very similar views on the relative importance of different items and activities.

There is a very high overall level of agreement.

PSE 2012 necessities – key findings

The survey finds the public:

- are relativists rather than absolutists
- believes that a minimum standard is not simply about subsistence
- backs contemporary standards
- thinks people should be able to participate in the society in which they live
- Strong consensus across all groups

Socially perceived necessities, 1983 to 2012

<https://www.poverty.ac.uk/pse-research/trends-attitudes-necessities-1983-2012>

- There is a core group of items and activities considered necessities across all five surveys, connected to basic needs
- Heating and a damp-free home have been the top two necessities throughout this period

New needs arise

- New technologies bring new consumer goods.
- As these goods become more widespread they have become embedded into how we, as a society, operate.
- There comes a moment when lack of the item means the person can no longer participate fully.

Tastes and fashions change

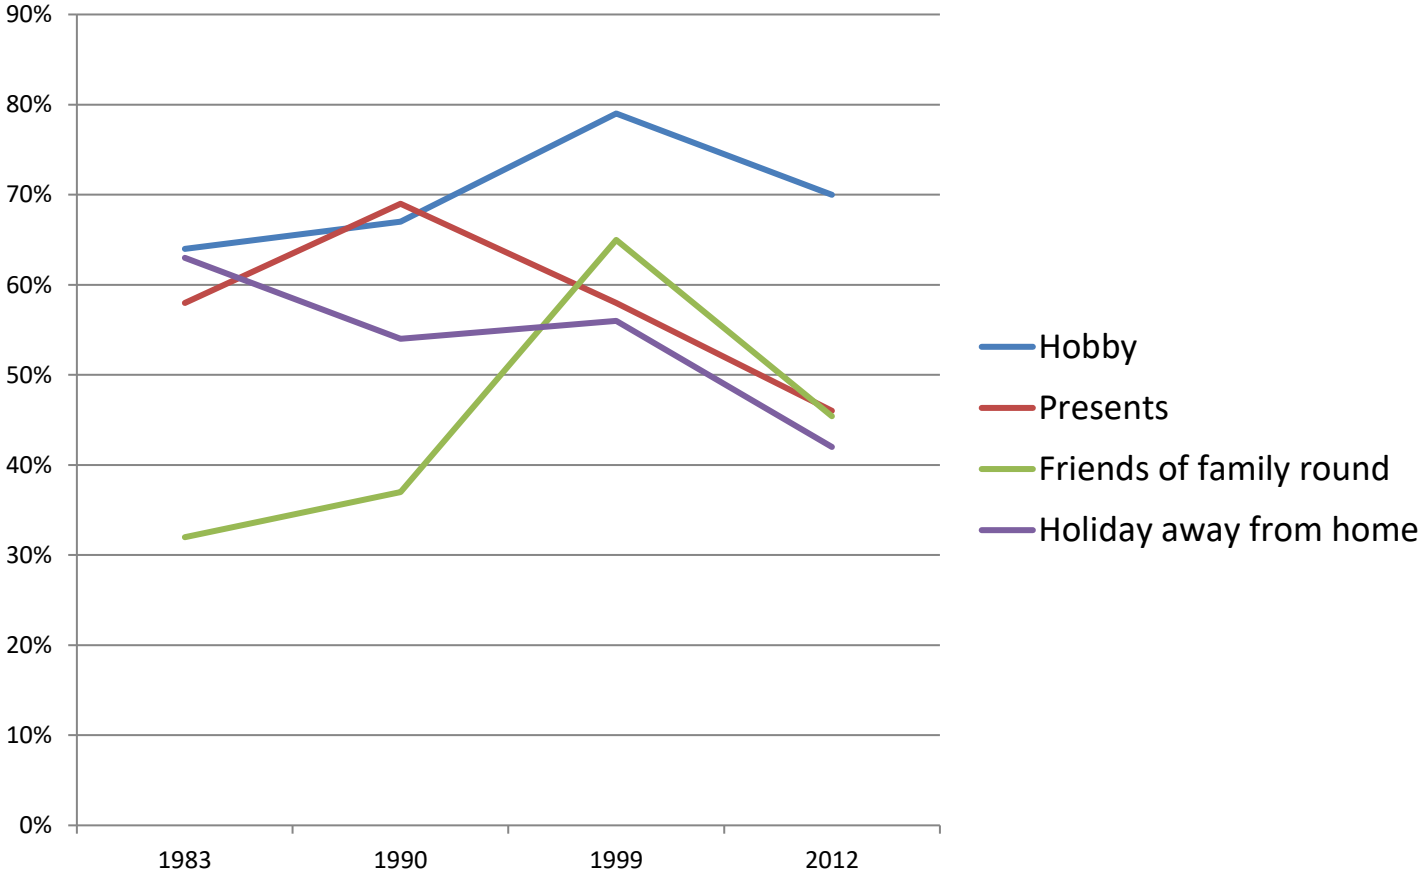

Consider the role of the 'roast joint':

- This has sunk from 57% seeing it as a necessity in 1983 to a mere 36% today.
- And the support that remains comes from the older generation – 59% of those aged 65 compared to just 23% of 16 to 24 year olds

Minimum standards reflect overall living standards

- Generally between 1983 and 1999, the percentage seeing an item as a necessity increased, reflecting a rise in overall living standards.
- In 2012, following the fall in real wages after the 2008 financial crash, some items which had had strong support in all past surveys dropped back (eg hobby or leisure activity) and some items with majority but not universal support previously, moved from being seen as 'necessities' to being 'non-necessities' (eg holiday away from home one week a year)

The rise and fall of leisure activities

Socially perceived necessities over time - conclusions

- Very strong support for the concept of a minimum standard of living
- The core as to what people see as essential to a minimum standard remains consistent across the years
- Minimum standards reflect the society in which we live and change over time
- Minimum standards adjust to reflect the rises and falls in people's expectations and shifting attitudes to remain relevant and realistic.

Socially-perceived necessities across time and space

Consensual method surveys across the world

Europe:

Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Rep, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Spain, Sweden, UK

Africa:

Benin, South Africa, Uganda

Asia:

Bangladesh, Hong Kong, Japan, South Korea

Oceania:

Australia, Tonga, Soloman Islands, New Zealand

Socially-perceived necessities across time and space

Does the consensual approach work outside high-income countries?

‘it is possible to imagine a society in which the majority of people do not have access to a standard of living that is generally judged to be a minimum’.

Mack and Lansley, Poor Britain, 1985, p67

https://www.poverty.ac.uk/system/files/poor_britain_book/poor-britain-chap03-Mack-Lansley.pdf

Socially-perceived necessities across time and space

Does Widespread Lack Undermine the Consensual Approach? Evidence from South Africa - 1

The concern

Widespread lack of material possessions and poor access to services – as in South Africa – could result in items being regarded as ‘less necessary’, which in turn could artificially deflate the definition and subsequent measurement of poverty using this approach.

Socially-perceived necessities across time and space

Does Widespread Lack Undermine the Consensus Approach? Evidence from South Africa - 2

28 of the 36 SPNs were possessed by a smaller % of the population than the % defining each item as essential.

Six of the SPNs were possessed by less than half the respondents (police on streets, ability to afford medicines prescribed by doctor, regular savings for emergencies, bath/shower in house, burglar bars and meat/fish/vegetarian equivalent every day).

Most people who lacked the purchasable SPNs said they did not have them due to lack of resources (i.e. not out of choice)

Socially-perceived necessities across time and space

Does Widespread Lack Undermine the Consensual Approach? Evidence from South Africa - 3

Item	All % Saying Essential (n=2904)	Black African % Saying Essential (n=1834)	Coloured % Saying Essential (n=480)	Indian/ Asian % Saying Essential (n=279)	White % Saying Essential (n=310)
*Mains electricity in the house	92	90	96	97	99
Someone to look after you if you are very ill	91	92	89	94	87
*A house that is strong enough to stand up to the weather e.g. rain, winds etc.	90	88	97	99	99
*Clothing sufficient to keep you warm and dry	89	87	96	99	96

Indian/Asian	4	96
White	7	9

Socially-perceived necessities across time and space

Does Widespread Lack Undermine the Consensual Approach? Evidence from Uganda - 1

Child item	Essential %	Don't have, can't afford %
A desk and chair for homework	55%	45%
A visit to the health facility when ill and all prescribed medication	97%	33%
All fees, uniforms of correct size and equipment	88%	34%
Books at home for their age	71%	59%
Bus/taxi fare or other transport	68%	41%
Educational toys and games	53%	44%
Own bed	81%	74%
Own blanket	85%	66%
Own room for children over 10 of different sexes	76%	17%
Presents for children once a year on special occasions	54%	70%
Some new clothes	70%	63%
Three meals a day	96%	48%
To be able to participate in school trips	69%	38%
Toiletries to be able to wash every day	93%	29%
Two pairs of properly-fitting shoes	79%	71%
Two sets of clothing	94%	17%

Socially-perceived necessities across time and space

Does Widespread Lack Undermine the Consensual Approach? Evidence from Uganda - 2

Household item	Essential %	Don't have, can't afford %
To be able to make regular savings for emergencies	92%	59%
Enough money to repair a leaking roof for main living quarters	86%	44%
To be able to replace broken pots and pans for cooking	84%	41%
Have your own means of transportation	79%	62%
Enough money to repair or replace any worn-out furniture	78%	66%
Enough money to repair or replace broken electrical goods	56%	66%

Is there a common view of necessities: a range of countries

Percentage thinking child items necessary/essential					
		UK	Tonga	Japan	Uganda
Food	Three meals a day	93	98	89	96
	Meat, fish or vegetarian equivalent daily	90	98		
	Fresh fruit and vegetables daily	96	96	79	
Clothes and shoes	Some new (not second-hand clothes)	65	97	23	69
	Two sets of clothing				94
	Properly fitting shoes ⁽¹⁾	93	98	42	78
Furniture	Beds and bedding ⁽²⁾	67	97		81
	Suitable space to do homework ⁽³⁾	89	97		55
Education	School Uniform and equipment		98		88
	Books suitable for their age	91	94	61	63

Notes: (1) Shoes: UK, Japan, new properly fitting shoes. UG Two pairs of properly fitting shoes including all weather shoes. (2) Beds UK Beds and bedding for everyone, Eurobarometer, 2007; Tonga, for all children aged 10 or older;

An enforced lack of necessities: Tonga, Uganda, UK

Items for children	Tonga	Uganda	UK
	Percentage who can't afford item		
Three meals a day	8%	48%	1%
One meal with meat, fish or vegetarian equivalent daily	8%		3%
Enough beds for every child in the household	11%	75%	
Own room for children over 10 of different sexes		60%	11%
A suitable place to study or do homework ²	10%	76%	5%
New properly fitting shoes ¹	12%	71%	4%
Some new not second-hand clothes	15%	63%	4%
All school uniform and equipment required ³	6%	56%	
Participate in school trips and school events that costs money	11%	64%	8%
Celebration on special occasions	17%	70%	1%

¹ Uganda - Two pairs of shoes, ² Uganda - Desk and chair for homework, ³ Uganda - All fees and uniform

Socially-perceived necessities across time and space

Socially-perceived needs across space

The surveys suggest that:

- The concept of socially-perceived needs is applicable to low-, medium- and high- income countries
- People are able to distinguish between needs and norms
- A striking level of agreement between different sub-groups even though they had very different standards of living
- The inclusion of services is very important in developing countries
- Reflect the society to which people live
- Are not heavily influence by adaptive preferences
- Does not impose minimalist standards on low-income countries

Socially-perceived necessities across time and space

Are there universal human needs?

The surveys suggest there is universal agreement on the need for:

- Adequate levels and variety of food – two/three meals a day, meat/fish etc
- Adequate levels of housing – enough beds/bedrooms, study area; heating – in colder countries; weather/wind proof housing
- Adequate levels of clothing – two pairs of shoes, replacing worn out clothes
- Access to health care – being able to afford medicines and medical care
- Education – school uniforms, school trips,
- Social obligations – visiting friends/family in hospital
- Some leisure activities seen as necessities in some cultures/countries
